WHATEVER THE WEATHER!

CRYSTALYX®

CATTLE BOOSTER

Ideal for all growing cattle and breeding bulls

- ✓ Enhances forage digestibility and improves forage intakes
- ✓ Helps to buffer all types of grazing pastures no matter what the seasonality challenges
- ✓ Balances nutrient deficiencies in forages - a more efficient rumen fermentation means more efficient forage digestion
- ✓ Improves animal health and performance

Important Notice for Purchasers and Vendors

Warranties

Unless otherwise stated, bulls and females are sold under Auctioneers General Sale Conditions and the NBA Conditions. Purchasers should ensure they collect their copy of the rules at the time of settlement, paying particular attention to warranty periods.

Deferred Warranties

Buyers purchasing bulls may request that the warranty is deferred for up to three months by completing a request form on day of sale. As the granting of a deferment is the prerogative of the vendor, buyers are advised to establish before the sale a vendor's willingness to defer a warranty. Auctioneers General Sale Conditions are contained within the sale catalogue.

Insurance

Purchasers are reminded that the 'risk' on purchased lots falls on them at the 'fall of the hammer'. Vendors' 'luck penny' insurance is sometimes offered to purchaser. Purchasers should establish exactly what is covered by this, ie what type of cover and for how long. Vendors are respectfully requested only to refer to insurance at the rostrum if it is mortality insurance; reference to fertility insurance is of no interest to buyers and can cause confusion.

Cattle Health Certificates

United Auctions strive to increase awareness of herd health in both the commercial and the pedigree sector. Health certificates have been produced which are used by many vendors at our sales. Purchasers should satisfy themselves as to the health/vaccination status of lots in which they are interested in advance of them being auctioned. This information is displayed above the animal or in the Vendor's Index at the front of this catalogue

Private Sales

Vendors and purchasers are reminded that any private sale in our premises must be booked through our office otherwise warranties will not be applicable.

Telephone Bids

Facilities for bidding by telephone are available only by prior arrangement with the Auctioneers.

TB

Cattle consigned from one and two year testing parishes are subject to a retest within 60 and 120 days of purchase, the expense of such tests to be borne by the purchaser.

Export Sales

At present animals cannot be exported direct from the Stirling Sales. Vendors offering lots subject to retest must notify our office in writing of any conditions they have offered to potential overseas buyers.

Official Sale Rules

All animals entered for sale under the auspices of any breed society shall be sold subject to and in accordance with the following rules.

1. The consignor must be a member of the relevant Breed Society. All animals must be clearly tattooed and/or tagged and registered in the Herd Book of the relevant Society by the Breeder, or in the case of imported animals, have been registered in the Herd Book of the country of origin and entered in the Herd Book of the relevant Society.
2. Should any dispute arise as to the identification in the Herd Book of the relevant Society of any animal exposed for sale as to the pedigree of any such animal, such dispute should be referred to the Council of the relevant Society or such Sub-Committee as the Council may appoint as Arbiters and their decision shall be final.
3. The Council of the relevant Society may, prior to any Sale, nominate and appoint a Panel of its members to inspect any animal forward at the Sale, in order to ascertain that such animals are fit for inclusion in the Sale. The members so appointed shall, in consultation with the Auctioneers, be the sole judges as to whether or not such animals be may included in the Sale and shall have power to debar from the Sale any animal which they consider is not of a fit standard. No consignor will have any claim for damages in respect of any animal which is rejected under this rule.

Conditions of Sale

A. Sale

1. All animals exposed for sale are the bona fide property of the vendors at the time of the sale, and are free of all liens, charges and encumbrants.
2. The highest bidder shall be declared the Purchaser (subject to Rule C(3)). The Auctioneers reserve the right to refuse any bid without giving a reason for so doing. All bids shall be in guineas and cattle will be sold in guineas (one guinea being equal to £ 1.05).
3. The Vendor has the right to fix a reserve price and to announce such price before, during or at the conclusion of the bidding. The right to bid by or on behalf of the Vendor in terms of the current Sale of Goods Act is expressly reserved. The Vendor, or his duly authorised representative, must be with the Auctioneer at the Sale of the catalogued animal to accept or reject the final bid.
4. Each animal forward at the sale must be exposed for sale by auction before any private sale shall be permitted or recognised by the Auctioneers.
5. Immediately after the sale of an animal, the price thereof shall be paid by the Purchaser in cash to the Auctioneers. On the price being paid the Purchaser shall receive from the Auctioneers a written removal order and shall at his own expense remove the animal within one day of the sale or within such other period (if any) as may be laid down by the Auctioneers at the commencement of the Sale. No animal shall be removed without the Auctioneers' written removal order and any animal so removed shall be recovered by the Auctioneers summarily without any further warrant.
6. TERMS OF SALE – CASH INTEREST CHARGEABLE FROM DATE OF PURCHASE AT 8% OVER BANK OF SCOTLAND BASE RATE. Purchases shall be governed by and constructed in accordance with the law of Scotland and the non-exclusive jurisdiction of Glasgow Sheriff Court is prorogated to this contract
7. In the event of any purchaser not paying for and not removing the animal purchased in compliance with Rule A (5) hereof the Auctioneers in their sole discretion may, without the

consent of the vendor either (a) sue the Purchaser either in their own name or in the name of the vendor for the price and interest thereon at the rate of two per cent per annum above the current Bank of Scotland Base Rate and for the keep of and other expense incurred by them in connection with such animal or (b), resell the animal either publicly or privately and on behalf of the vendor recover from the defaulting Purchaser the deficiency (if any) attending such resale and interest thereon as aforesaid together with the keep and all other expenses. The defaulting Purchaser shall have no right to object to the Action taken by the Auctioneers. In the event of there being any surplus after paying interest, keep and other expenses as aforesaid, such surplus shall be paid to the defaulting Purchaser

8. All animals are the risk of the Vendor before sale. Immediately after the purchase of each animal is declared, the risk of the animal shall pass to the Purchaser, but until the price is paid, the right of property shall not pass and delivery of the animal may be suspended.
9. In the case of animals sold privately within the premises of the Auctioneers the risk and the passing of property thereof shall be governed by the bargain made between the parties and Rule A (7) shall not apply thereto. Animals withdrawn from the Auction may be sold by private treaty on the Auction premises. Private sales will be held to the Vendors' guarantees of fertility and must be put through the Official Auction record by the Appointed Auctioneers.
10. No undertaking by the Auctioneers or their servants to take charge of any animal after the sale or to forward it to its destination shall be held to impose on the Auctioneers any legal obligations or invalidate any of these Rules.
11. No Liability whatsoever is undertaken by the Auctioneers for the accuracy or otherwise of the statements appearing in this Catalogue or made at the sale. The Vendor is responsible for such statements and for any error, omission or mis-statement.
12. (a) If a bull from which semen has been stored is offered for sale, it must be stated in the catalogue (and if different circumstances have arisen since the catalogue was printed, the correct and up-to-date circumstances must be announced from the auctioneer's rostrum at time of sale) whether the semen so stored is to pass with the ownership of the bull or whether it is to be retained by the vendor. If it is retained by the vendor, then he must declare if he is reserving the right to sell or gift such semen for pedigree and/or commercial use. If such declaration fails to be made it will be assumed that any semen retained is for the vendor's own use only and cannot be sold or gifted for pedigree or commercial use.

(b) If a female in calf to a royalty bull is offered for sale, it must be stated in the catalogue (and if different circumstances have arisen since the catalogue was printed, the correct and up-to-date circumstances must be announced from the auctioneer's rostrum at time of sale) whether the payment of the royalty for the subsequent registration of the unborn calf will be the responsibility of the vendor or the vendee. If such declaration fails to be made it will be assumed that payment of the royalty will be the responsibility of the vendor.
13. If a female offered for sale has been used as an embryo donor the fact that she has been flushed must be stated in the catalogue along with the number of embryos collected complete with their sire/sires up until the time of the donor being offered for sale.
14. In the event of a female carrying a transferred embryo being offered for sale, the number of embryos collected at the same time as that carried by the female entered for sale must be stated in the catalogue.
15. Animals infected by contagious diseases i.e., warts, ringworm etc, will not be accepted for sale unless accompanied by a vet's certificate indicating that treatment has been given and the condition is no longer contagious.

16. Apart from the Bull and Female breeding warranties printed in the catalogue or others specifically given by the Vendor in this catalogue or made at the sale, animals are sold subject to their condition and to all faults, excepting the case of animals suffering from total or partial blindness.
17. Should any animal be sold subject to passing tests or retests full details of these must be declared by the Vendor to the Auctioneers prior to the sale. The bargain shall not be deemed to be concluded until the results of such tests/retests are notified to the Auctioneers.
18. No Rosettes or Sashes won at other Shows or Tests to be affixed to Show animals.
19. The Auctioneers reserve the absolute right to take blood samples from any animal presented at Shows and Sales and to have the sample independently analysed at a certified Laboratory. A sample will also be given to the Vendor for his own use.
20. All Bulls must have a nose ring and all entries must be either double-haltered in their stalls or pens, or secured with a strong halter and a neck band.

B. Commission

1. The Auctioneers shall charge and deduct a commission of 5p per £1.05 from the price of all animals sold, including those which may be sold privately in their premises at the time of sale. Any Society Levy ruling will also be deducted.
2. The Auctioneers shall be entitled to charge against the owner two and a half per cent on the price bid or £25 per animal whichever is the greater on all animals put through the sale ring and withdrawn.
3. The Auctioneers shall not be entitled to charge commission on animals sold which fail a re-test (see Rule A (17)) but shall be entitled to make a charge against the owner of £100 per animal.
4. In the foregoing Rules, the word “animal” shall be held to include a dam and a calf when sold together.

C. General

1. Without prejudice to the foregoing Rules, it is hereby expressly declared that the Vendor by selling and the Purchaser by purchasing any animal shall be bound by the above Rules notwithstanding the terms of any statutory enactment or custom of trade to the contrary.
2. The Auctioneer is the Judge of the Sale, to whom all disputes and differences of any kind which may arise at and in relation to the Auction either between Vendors and bidders or among bidders themselves shall be referred and his decision shall be final and binding on all parties.
3. Any dispute as to any matter for the settlement of which no provision is made within these rules, shall be referred to an Arbitrator or Arbitrators to be appointed, failing agreement between or amongst the parties by the Auctioneers. The decision of the Arbitrators so appointed shall be final and binding on all parties to the dispute. Any Arbitration under this clause shall be subject to the provision of the Arbitration Act for the time being in force in Scotland and shall be deemed to be a reference to Arbitration thereunder.
4. Members of any Society who enter cattle for sale in the catalogue and who do not present their animals will be subject to the following fines – Male entries £100.00, Female entries £100.00. A Veterinary Surgeon’s Certificate or reasonable grounds for withdrawal will, if accepted, eliminate the member from such a fine.
5. After Society inspections, all animals are identified by lot numbers. These numbers must remain on lots while they are on the market premises.

Please note that asterisks appear in the following Clauses:-

4.1

4.2

5.1

5.1.1 ("twenty-eight months" and "twenty-four months")

5.2

5.2.1 ("twenty-eight months" and "twenty-four months")

5.3

5.4

5.5.3

5.6.3

5.7.3

8.1.2.1 (b)

8.1.2.2 (b)

The asterisks appear against ages and gestation periods, which vary from breed to breed.

Female Guarantees

We would draw your attention to the NBA breeding warranties which state that cows 10 years of age and over on the date of sale are excluded from the female breeding warranty.

Limousin bull index

The Vendors' Index includes a condensed version of the Herd Health information submitted at point of entry by the vendor. For further information, please see Explanatory Notes & copy of Herd Health Declaration form also included in the catalogue.

Dispersal of the Lingland herd

The property of Messrs M & D Sutherland

The Lingland herd was formed by husband and wife team Magnus and Diane Sutherland in Caithness at the far north of Scotland. It is a small genuine herd of quality females bred from top AI bulls. All animals presented for sale are all very well handled so have the best of temperaments and would be an asset to any herd. The Lingland herd has never had a case of Johnes, BVD, Lepto or IBRA and is only dispersing due to ill health and forced retirement.

INDIVIDUAL HEALTH DECLARATIONS – SUPPORTING THE PURCHASE OF HEALTHY STOCK

All cattle with individual health declarations should have an A3 copy, signed by the testing laboratory, for display in the sale pen, and an A4 copy containing more detailed information to be passed on to the purchaser. An example certificate is shown below and an explanatory note given of what information is contained on a pen card.

1. The diseases are listed in column (1). The TB testing interval is given beside the TB title if known.
2. **Herd** accreditation is shown in column (2). Herds that are accredited for BVD, IBR or leptospirosis have a white coloured box in this column containing the number of years the herd has been accredited. The herd's Johne's risk level is shown, along with the number of years the herd has been at this level. Only Johne's risk level 1 herds are given a white box. When provided, the date of the last clear herd TB test is displayed.
3. Results for **individual** testing are shown in column (3) and are colour-coded as follows:

Antibody negative
IBR or Leptospira hardjo antibody positive
BVD antibody positive

Note that **bulls with positive BVD antibody titres** (green box) and no known history must not be used for 10 weeks after testing as they can carry the virus for this time after infection. **Pregnant females that test positive for antibodies to BVD** will not be given pen cards unless the animal was known to be antibody positive or fully vaccinated prior to service.

4. The date of **vaccination** is given in column (4). Where marker vaccination has been given for IBR, this is indicated. Further details on vaccination are given on the accompanying A4 sheet.

(1)	(2)	(3)	(4)
Name: BEST BEEF OUT		Ear Number: UK123456 789101	
DISEASE	HERD ACCREDITED (YEARS)	INDIVIDUAL TEST RESULT	VACCINATED
BVD	1	11-Jan-13	11-Jan-13
IBR		11 Jan 13 (MARKER)	04-Sep-12 (MARKER)
LEPTO		11-Jan-13	
TB 4	Jan-13		Information Applies to 2013 Stirling February Sale
JOHNE'S	Risk Level 1 3 years		
Veterinary Provider:		How Accredited Free of Disease for Individual Antibody Negative IBR, Leptospira, Brucella, Feline BVD Antibody Positive This animal has tested free of BVD virus or is from a BVD accredited free herd	
Date:			

Standard Cattle Health Certificate developed by an all industry group facilitated by NFU Scotland

Example certificate for a bull from a herd accredited for BVD & carrying the lowest risk of being infected with Johne's. The bull has tested clear of IBR & leptospirosis and been vaccinated against these diseases and BVD.

This information is intended as a guide to the cattle health declaration. It is important to remember that **there are no absolute guarantees of freedom from disease**. All newly purchased stock should be routinely isolated and tested if required before introducing them to existing stock. If in doubt ask for advice on biosecurity from your own or health scheme vets.

CHeCS Johne's Programme

The CHeCS Johne's programme has changed to a graded system (see table) which is designed to enable herds to maintain or move towards clear herd tests. This is achieved through a combination of testing and the implementation of a management programme. It is essential for herds within levels 1-4 to have a health plan in place covering the control of Johne's disease. The health plan must be updated annually and endorsed by both vet and farmer.

Status	Definition
Level 1:	This is directly equivalent to the previous CHeCS Accredited free status. Level 1 status is associated with the lowest risk source when buying in stock. Health plan required.
Level 2:	Herds with level 2 status have had one or two clear consecutive herd tests. Health plan required.
Level 3:	Herds with level 3 status have reactors identified at the annual herd test, but these are no more than 3% of the animals tested. Health plan required.
Level 4:	Herds with level 4 status have reactors identified at the annual herd test, and these amount to more than 3% of the animals tested. Health plan required.
Level 5:	Any herd that is not carrying out the required testing or does not have a suitable health plan in place automatically falls into this category. Level 5 status is considered to be the greatest risk source when buying in stock.

A User's Guide to Estimated Breeding Values

Contents

1. Estimated Breeding Values (EBVs)
2. How are EBVs Calculated?
3. Breeding Indexes
4. Accuracy
5. EBV Indexes
6. 200 Day Milk

10. Further Information

1. Estimated Breeding Values

Many factors influence the appearance and performance of a bull, so selecting 'by eye' alone can be misleading. The only accurate way of assessing the genetic potential of an animal (i.e. what it can pass on to its calves) is by using Estimated Breeding Values (EBV's) and Indexes. These are produced by Signet using a system known as BLUP (Best Linear Unbiased Predictor) and are calculated from animals' individual performance records as well as those of all their known relatives, where the effects of the environment (feeding, management, disease, climate etc) are sifted out to leave an estimate of the genetic value for each trait, as follows...

EBV	What Does the EBV Indicate?	Look for...
Birth Weight (kg)	Genetic potential for calf weight at birth	High negative EBVs if you want low calf birth weights
Calving Ease (%)	Ease with which a bull's progeny will be born	High positive EBVs if you want less assisted calvings
Maternal Calving Ease (%)	Ease with which a bull's daughters will calve	High positive EBVs if you want less assisted calvings
Gestation Length (days)	Genetic potential for gestation length	High negative EBVs if you want short gestation lengths
200 Day Milk (kg)	The maternal component of 200 day growth (i.e. the contribution that the milking and maternal abilities of a bull's daughters make towards their calves' growth at 200 days of age)	High positive EBVs if you want daughters to wean heavier calves
200 Day Weight (kg)	Genetic potential for growth from birth to 200 days of age	High positive EBVs if you want high growth rates to weaning
400 Day Weight (kg)	Genetic potential for growth from birth to 400 days of age	High positive EBVs if you want high growth rates to finishing
Muscle Depth (mm)	Genetic potential for muscularity and potential to increase lean meat yield	High positive EBVs if you want good calf conformation
Fat Depth (mm)	Genetic potential for leaner carcasses	High negative EBVs if you want to produce leaner carcasses or take calves to heavier weights without penalty for fatness
Age at 1st Calving (%)	Genetic potential for early sexual maturity	High negative EBVs for a greater proportion of heifers that hold to 1 st service

Longevity (years)	Genetic potential for long life in the breeding herd	High positive values for animals likely to remain in the herd for longer
Calving Interval (days)	Genetic potential for the time taken to get back in calf	High negative values to breed cows that get back in calf quickly
Docility (%)	Genetic potential for being calm when handled	High positive values for animals that are likely to be more calm when handled
Scrotal Circumference (cm)	Genetic potential for scrotal size. Linked to male serving capacity and puberty of daughters.	High positive values for animals with higher likely serving capacity and earlier maturing daughters.

2. HOW ARE EBVs CALCULATED?

EBVs are calculated using information from several sources:

- Measurements from the animal itself
- Measurements from the animal's herd mates (known as 'contemporaries' *)
- Measurements from the animal's relatives and their contemporaries
- The degree to which one trait influences another (known as a 'correlation' *)
- The degree to which each trait is passed on to the next generation (known as 'heritability' *)

* Terms explained below

Heritability and Correlations

Heritability

This is a term used to describe the strength with which traits are inherited and it varies depending on the trait in question. Generally:

- Traits associated with reproduction and survival have low heritabilities
- Milk production and early body size have medium heritabilities

- Later growth and carcase traits (i.e. fat and muscle) have relatively high heritabilities

Where traits with relatively good heritability are concerned, when something is known of the performance of one or both parents, then a prediction can be made as to how the offspring will perform and BLUP uses this 'knowledge' to enhance the accuracy of its EBV calculations.

Correlations

This term describes the direction and strength of the association between two traits. For example, some traits are highly positively correlated, such as 200-Day Growth and 400-Day Growth, whilst others are highly negatively correlated, such as 400-Day Growth and Calving Ease. When something is known of one trait but perhaps not another, a prediction can be made based on what is known about the correlation between them. This again enhances the accuracy of the EBV in question and helps deal with situations where records for a trait are limited or unavailable.

3. BREEDING INDEXES

It is often desirable to select animals on the basis of more than one EBV. Indexes focus on specific breeding goals and combine the appropriate EBVs in to a single figure based on their relative economic value. This is widely regarded as the most efficient method of selecting on a number of traits at once.

Signet currently produces three beef Indexes, as follows:

* New EBVs not yet published at breed sales

When using an Index it is important that your breeding objective is broadly similar to that of the Index in question, otherwise you may unwittingly change aspects of your herd that you did not necessarily want to.

4. ACCURACY

An Accuracy Value is published next to every EBV and Index. Accuracy Values are expressed as a % and indicates the quantity and quality of records used to produce the EBV or Index.

Several things affect the accuracy of an EBV or Index, namely:

- The amount of information on the trait from the animal itself
- The amount of information on the trait from relatives of the animal

- The heritability of the trait concerned
- The amount of information from the animal and its relatives on traits correlated with the trait of interest and the strength of the correlations which vary between different traits.
- The number of herd mates from the same management group recorded ('contemporaries').

Scaling for Low Accuracy

An important feature of BLUP EBVs is that they are scaled to account for the amount of performance information on which they are based. EBVs based on very little information get adjusted towards the average EBV and this adjustment applies to both high and low EBVs.

This prevents animals gaining very high or very low EBVs as a result of a few very good or very poor records and is designed to protect the user from risk. The more information available on an animal and its relatives, the less the EBVs are adjusted.

Accuracy Values indicate how similar an animals' EBVs are to its true breeding value. They predict the likelihood that an animals EBVs will change over time

5. EBV INDEXES

To aid interpretation at breed sales, all Limousin EBVs are presented in index form based around an average of 100 with an approximate range of 70 to 130. For example:

	Calving Value	200 Day Milk (kg)	200 Day weight (kg)	400 Day weight (kg)	Muscle Depth (mm)	Fat Depth (mm)	Beef Value
EBV	LM -4C	-1	+25	+34	+3.40	-0.20	LM +23
Accuracy %	85	54	75	73	68	66	73
Index	77	98	112	106	111	111	108

Below average

Above average

6. MATERNAL EBVs

Many commercial and pedigree producers are breeding their own female replacements and need to identify bulls with superior maternal attributes.

200 Day Milk EBV

One of the most important maternal EBVs is the 200 Day Milk EBV – indicating the degree to which 200 day milk is influenced by maternal performance – e.g. milkiness and general mothering ability.

As well as predicting breeding potential for growth to 200 day of age, the 200 day weight can be used to assess an animals breeding potential for milking ability.

Consider the performance of the grand-offspring of a bull. The weights of all of his grandprogeny are influenced by his growth genes, but only those produced by his daughters are affected by his genes for milk.

If the grandprogeny produced by his daughters are constantly heavier than those produced by his sons, then this is likely to be due to his superior genes for milk production.

Interpretation

A bull with an EBV of +4 for 200-Day Milk is expected to produce heifer calves which will have above average maternal characteristics leading to their calves being 2kg heavier at 200-days than calves from heifers sired by a bull with an EBV of 0.

Maternal Calving Ease

This EBV predicts how easily a bull's daughters will calve. It should not be confused with the Calving Ease EBV which predicts how easily a bull's progeny will be born.

The Maternal Calving Ease EBV is calculated from calving records and is expressed as a % indicating the proportion of unassisted calvings.

Interpretation

A bull with a Maternal Calving Ease EBV of 2% will produce females that have 1% more unassisted calvings than a bull with an EBV of 0.

EBVs are also produced for: Longevity, Age at First Calving and Calving Interval but these are not yet published at breed sales.

7. How to Use EBVs and Indexes

EBVs are expressed in the same unit as the recorded trait (e.g. kg for 400-Day Weight, mm for Muscle Depth etc) and are relative to a Breed Benchmark, which is updated and published annually.

Limousin Breed Benchmark 2014

Trait	BOTTOM			AVERAGE	TOP		
	1%	10%	25%		25%	10%	1%
Gestation Length (days)	3.8	2.0	1.2	0.5	-0.2	-0.9	-2.7
Calving Ease (%)	-8.6	-5.0	-3.7	-2.4	-1.3	-0.4	0.9
Maternal Calving Ease	-1.0	-0.1	0.3	0.6	1.0	1.3	1.7
Birth Weight (kg)	3.5	2.5	1.9	1.4	0.9	0.5	-0.4
Calving Value	LM-5C	LM-2C	LM-1C	LM0C	LM1C	LM2C	LM4C
200-Day Milk (kg)	-6	-3	-2	-1	1	2	5
200-Day Weight (kg)	-3	7	13	18	26	33	47
400-Day Weight (kg)	-3	14	23	33	45	57	81
Muscle Depth (mm)	-0.6	0.8	1.4	2.3	3.3	4.4	6.2
Fat Depth (mm)	0.4	0.1	0.0	-0.1	-0.2	-0.3	-0.6
Beef Value	LM6	LM14	LM18	LM22	LM27	LM33	LM43
Maternal Value	LM-20V	LM-8V	LM-2V	LM4V	LM10V	LM16V	LM28V

When using EBVs it is important to remember that although they can be compared between herds, they can not be compared between breeds.

Using the Breed Benchmark, compare and contrast the EBVs and Indexes of the two young bulls below.

Bull A

Analysis Date	Calving Value	200 Day Milk (kg)	200 Growth (kg)	400 Growth (kg)	Muscle Depth (mm)	Fat Depth (mm)	Beef Value
24/10/2008	LM1C	4	28	42	4.1	-0.1	LM27
EBV							
Accuracy %	57	42	72	69	69	62	63
Index	100	120	122	117	128	103	120

100 day wt	200 day wt	300 day wt	400 day wt	500 day wt	Scanned
118	253	378	556	710	Yes

Signet
PBC's Signet Breeding Service

Bull B

Analysis Date	Calving Value	200 Day Milk (kg)	200 Growth (kg)	400 Growth (kg)	Muscle Depth (mm)	Fat Depth (mm)	Beef Value
24/10/2008	LM4C	-5	30	52	2.0	0.3	LM25
EBV							
Accuracy %	59	43	73	68	66	60	64
Index	120	86	124	125	107	76	116

100 day wt	200 day wt	300 day wt	400 day wt	500 day wt	Scanned
126	256	385	568	755	Yes

Signet
PBC's Signet Breeding Service

- Each bull has been fully weight recorded (i.e. they both have a complete set of 100-day adjusted weights), scanned (the box says 'Yes') and possesses satisfactory accuracy figures, given their age.
- Both bulls have EBVs for growth and carcase traits that are above the breed average, but in several ways their characteristics differ:
 - > Bull A has a higher Muscle Depth EBV
 - > Bull B has the highest EBVs for growth rate (weight) EBVs
 - > Bull A has a 200-Day Milk EBV in the Top10% of the breed
 - > Bull B has a Calving Value in the Top 10% of the breed

Bull A would be the most suitable out of the two for a unit where conformation takes high priority. The high 200-Day Milk Weight EBV would also make it suitable for herds where female replacements are retained for breeding.

The high Calving Value of Bull B indicates that it would be more suitable for mating to heifers. It could also be used in herds where a priority is to improve growth.

Remember

When trying to establish just how much influence a bull will pass on to his progeny it is important to remember to halve the value of the EBV, since the other half of a calf's genes comes from the cow.

For example, a bull with a 400-Day Growth (weight) EBV of +62 is estimated to have the genetic potential to be 62kg heavier at 400 days of age compared to a bull with an EBV of 0.

Based on their sire's genetics, his calves would be expected to be 31kg heavier at that age when compared to calves by a bull with an EBV of 0, since they only inherit half of their growth genes from their sire (the other half coming from their dam).

8. UNDERSTANDING SALE CARDS AND CATALOGUES

Estimated Breeding Values on Sale Cards

EBVs and Indexes are produced on sale cards as shown below:

Bars that lie to the right of the central line indicate the EBV/Index is above breed average (and the further it is to the right, the higher above breed average it is). Similarly, bars to the left of the central line indicate the EBV/Index is below breed average (and the further to the left it is, the further below average it is).

In sale catalogues, the same figures are produced in table format similar to the examples of Bull A and Bull B above. The EBV Index (bottom line) will quickly indicate where values lie in relation to the breed average. The Breed Benchmark printed in the front pages of the catalogue will allow further refinement of this.

9. EBV and PEDIGREE INFORMATION JUST A CLICK AWAY

EBV and pedigree information on all Limousin cattle are just a few internet clicks away...

Step 1: Click the 'Basco Online Herd Book' button on the Limousin Society homepage (www.limousin.co.uk)

Step 2: In the 'All Breeds Quick Search' box type the name or ear number of the animal you are interested in or click on the 'Breeder Search' button to look at all animals belonging to or bred by a particular breeder.

The site will then tell you the animal's owner/breeder details, its EBVs, its pedigree and list its progeny with full links to all of their information.

10. FURTHER INFORMATION

For further information, please contact Alison Glasgow, British Limousin Cattle Society on telephone 01721 730664, e-mail alison@limousin.co.uk or visit the BLCS web site www.limousin.co.uk

Tight calving pattern in bolused Limousin herd

A Limousin suckler beef breeder says Tracesure Cu/I boluses are a small investment to make for thrifty calves and a tight calving pattern.

Berwyn Lloyd (pictured) runs a herd of 80 Limousin cows in Pembrokeshire, running his stock outside for all but six weeks of the year.

He achieves this by winter grazing the herd on forage kale with no silage or straw supplementation.

Although Mr Lloyd's cows had been thriving on this system he had issues at calving. "Quite a few calves were born backwards and the cows were not really trying to calve, it seemed as if they just couldn't be bothered to get on with it."

Goitrogens in the kale were leaving the cows short of iodine and this was at the root of the calving

issues. Mr Lloyd started bolusing the cows with Tracesure Cu/I, in October before they grazed kale and in March, just before bulling.

There are now virtually no calving problems. "The calves are very thrifty, they are up on their feet immediately and suckling colostrum and there is no doubt in my mind that it was very good colostrum because of all the cows that have calved this year I haven't had to use any scour formula or anything at all."
