

LIMOUSIN PERFORMANCE RECORDING

New International EBVs

A further BLCS project that will shortly come to fruition is some work that has taken place over recent years to integrate performance information from France and Ireland within the UK evaluation.

It is planned that in 2013, data from both these countries will be incorporated in to the UK Limousin evaluation. This will offer a more accurate evaluation of animals that are imported from these countries, or related to animals that are imported. Additionally, as the pool of animals in the evaluation widens, so too does the opportunity to find true high-performers.

International Comparisons

- ✓ A project with BLCS, the Irish Limousin Cattle Society and the French Limousin Herdbook as partners. Managed by Interbeef.
- ✓ Main objective: to initially evaluate 200 Day Growth EBV across the three populations and integrate French and Irish information within the UK evaluation.
