## LIMOUSIN PERFORMANCE RECORDING

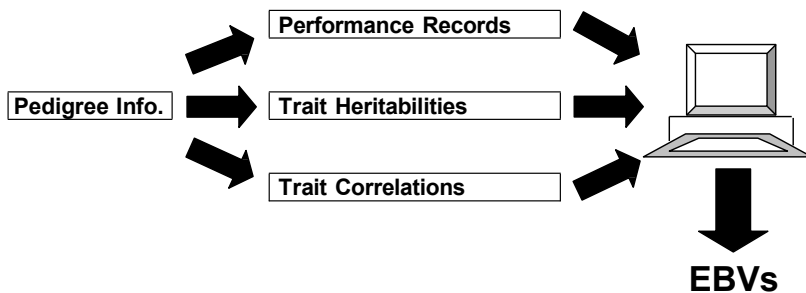

### HOW TO USE LIMOUSIN BREEDING VALUES

ESTIMATED BREEDING VALUES (EBVs) & GENOMIC BREEDING VALUES (GEBVs)

#### 1. What Are EBVs?

Many factors influence the appearance and performance of a bull. For example, age, nutrition, management, age of dam, health, season, quality of farm and the genes it has inherited from its parents. The only factor that can be passed on to its calves, however, is its inherited genetic potential. Estimated Breeding Values are measures of that potential and are calculated from the following:

- Measurements from the animal itself
- Measurements from the animal's herd mates (known as 'contemporaries')
- Measurements from the animal's relatives and their contemporaries
- The degree to which one trait influences another (known as a 'correlation')
- The degree to which each trait is passed on to the next generation (known as 'heritability')

## 2. What Are GEBVs?

In March 2016, Genomic Breeding Values (GEBVs) became available for all Limousin cattle for a range of new Carcase Traits. In July 2017, GEBVs also became available for three new Female Fertility traits and Calf Survival. They are the first of their kind within the UK's beef sector and are the result of five years of research between British Limousin Cattle Society, ABP Food Group and SRUC.

**GEBVs take conventional EBVs a step further by using information from animals' DNA as well as the usual measurements of performance.** To produce the breeding value the DNA is compared to a DNA 'key' for the breed:

This key is created from a core population of Limousin animals that have been measured on-farm and in the abattoir as well as having DNA collected

The key is like a library that cross refers information from the DNA strand with different levels of abattoir performance.

GBVs are produced by comparing the DNA of an animal with the key. They are calculated from the correspondence of that animal's DNA with those in the library

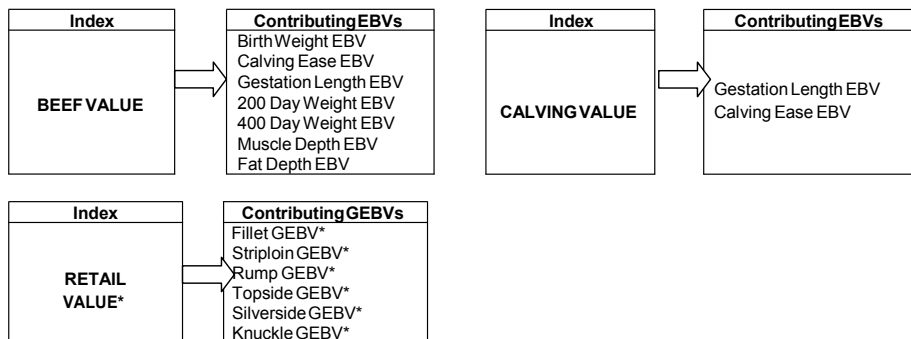

### GEBVs are used in exactly the same was as EBVs...

Albeit they are produced in slightly different ways GEBVs are in essence breeding values that indicate genetic merit as EBVs do and the way the two are used should not differ (see paragraph 5 below).

## 3. What Are Breeding Indexes?

It is often desirable to select animals on the basis of more than one EBV/GEBV. Breeding Indexes focus on specific breeding goals and combine the appropriate EBVs/GEBVs in to a single figure based on their relative economic value. This is widely regarded as the most efficient method of selecting on a number of traits at once.

Three Breeding Indexes are available at sales, as follows:

\* GEBVs available for animals that have been genotyped for this purpose and where the values have been published by the owner.

**When using an Index it is important that your breeding objective is broadly similar to that of the Index in question, otherwise you may unwittingly change aspects of your herd that you did not necessarily want to.**

## 4. What Breeding Value Information Is Available?

In sale catalogues, EBVs & GEBVs are produced for up to eighteen traits that focus on an animal's economic performance.

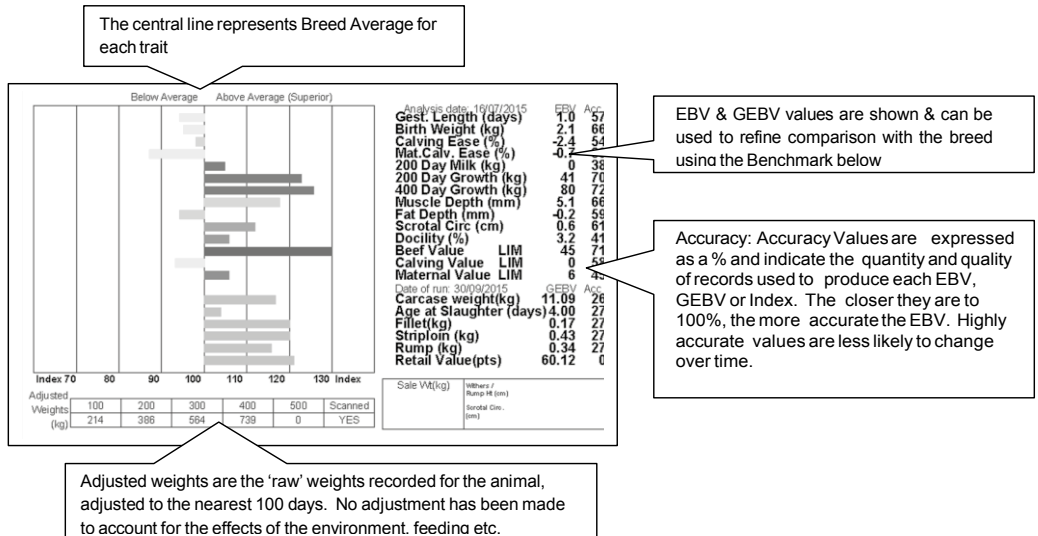

Trait	Breeding Value Indicates...	Look for...
<b>Birth Weight (kg)</b>	Genetic potential for calf weight at birth	<b>High negative EBVs</b> if you want low calf birth weights
<b>Calving Ease (%)</b>	Ease with which a bull's progeny will be born	<b>High positive EBVs</b> if you want less assisted calvings
<b>Maternal Calving Ease (%)</b>	Ease with which a bull's daughters will calve	<b>High positive EBVs</b> if you want less assisted calvings
<b>Gestation Length (days)</b>	Genetic potential for gestation length	<b>High negative EBVs</b> if you want short gestation lengths
<b>200 Day Milk (kg)</b>	The maternal component of 200 day growth (i.e. the contribution that the milking and maternal abilities of a bull's daughters make towards their calves' growth at 200 days of age)	<b>High positive EBVs</b> if you want daughters to wean heavier calves
<b>200 Day Weight (kg)</b>	Genetic potential for growth from birth to 200 days of age	<b>High positive EBVs</b> if you want high growth rates to weaning
<b>400 Day Weight (kg)</b>	Genetic potential for growth from birth to 400 days of age	<b>High positive EBVs</b> if you want high growth rates to finishing
<b>Muscle Depth (mm)</b>	Genetic potential for muscularity and potential to increase lean meat yield	<b>High positive EBVs</b> if you want good calf conformation
<b>Fat Depth (mm)</b>	Genetic potential for leaner carcasses	<b>Negative EBVs</b> if you want to produce leaner carcasses or take calves to heavier weights without penalty for fatness
<b>Age at 1<sup>st</sup> Calving (days)</b>	Genetic potential for early sexual maturity	<b>High negative EBVs</b> for a greater proportion of heifers that hold to 1 <sup>st</sup> service
<b>Calving Interval (days)</b>	Genetic potential for the time taken to get back in calf	<b>High negative values</b> to breed cows that get back in calf quickly
<b>Docility (%)</b>	Genetic potential for being calm when handled	<b>High positive values</b> for animals that are likely to be more calm when handled
<b>Scrotal Circumference (cm)</b>	Genetic potential for scrotal size. Linked to male serving capacity and puberty of daughters.	<b>High positive values</b> for animals with higher likely serving capacity and earlier maturing daughters.
<b>Age to Slaughter GEBV (days)</b>	Age at slaughter assuming a standard carcass weight of 350kgs	<b>High negative values</b> (less days) for animals that will reach 350 kg deadweight quicker
<b>Carcass Weight GEBV (kg)</b>	Carcass weight at a standard slaughter age of 600 days	<b>High positive values</b> for animals that will reach heavier carcass weights at 600 days of age
<b>Fillet GEBV (kg)</b>	Weight of fillet at a standard slaughter age of 600 days and carcass weight of 350kg	<b>High positive values</b> for higher fillet weights in the carcass
<b>Striploin GEBV (kg)</b>	Weight of striploin at a standard slaughter age of 600 days and carcass weight of 350kg	<b>High positive values</b> for higher striploin weights in the carcass
<b>Rump GEBV (kg)</b>	Weight of rump at a standard slaughter age of 600 days and carcass weight of 350kg	<b>High positive values</b> for higher rump weights in the carcass

**Breeding values for further traits for each animal are available on [www.taurusdata.co.uk](http://www.taurusdata.co.uk).** Enter animal name or ear number in the Quick Search box. You can also search by breeder and by breeding values ('Breeder Search' and 'EBV Search'). The additional traits available are:

- Longevity EBV & GEBV
- Calf Survival EBV & GEBV
- Silverside EBV & GEBV
- Topside EBV & GEBV
- Knuckle EBV & GEBV

## 5. How to Use the Information in This Catalogue

EBVs & GEBVs are expressed in the same unit as the recorded trait (eg kgs for 400 Day Weight, mm for Muscle Depth etc) are relative to the Breed Average. In sale catalogues, Breed Average for each trait is represented by the vertical line that is central on the bar chart. Bars that lie to the right of that line indicate EBVs/GEBVs that are above average. The further to the right they lie, the higher above Breed Average they are. Equally, bars that lie to the left of the line indicate EBVs/GEBVs that are below Breed Average. The further to the left they are, the further below Breed Average they are. An example is as follows:

The numeric EBV & GEBV values on the charts can be used to further refine comparison with the breed using the Breed Benchmark below. This is updated annually.

## 6. Things to Consider...

- To establish just how much influence a bull will pass on to his progeny it is important to remember to halve the value of the EBV/GEBV, since the other half of a calf's genes comes from the cow.

For example, a bull with a 400-Day Growth EBV of +62 is estimated to have the genetic potential to be 62kg heavier at 400 days of age compared to a bull with an EBV of 0. His calves would be expected to be 31kg heavier at that age when compared to calves by a bull with an EBV of 0, since they only inherit half of their growth genes from their sire (the other half coming from their dam).

- Select animals using EBVs/GEBVs that are relevant to your farm, cow type and market

## LIMOUSIN DAY APRIL 2018

- Bear in mind that EBVs/GEBVs predict an animal's economic performance. They are no judge of factors such as soundness, locomotion, breed type etc and you must be satisfied with your potential purchase in these respects too.
- Consider the traits that will make you most money, but
- Don't forget to check traits you may be compromising in pursuit of your goals, such as Calving Ease etc
- EBVs/GEBVs change as time goes on. New calves and new performance records tell us more about animals' breeding potential. Limousin EBVs/GEBVs are updated three times per annum and all values will change as more information is added and the accuracy of the predictions increases.

### 7. EBV/GEBV & Pedigree Info Just a Click Away

**Step 1:** Click the 'Taurusdata Online Herd Book' button on the Limousin Society homepage ([www.limousin.co.uk](http://www.limousin.co.uk)) or go direct to [www.taurusdata.co.uk](http://www.taurusdata.co.uk)

**Step 2:** In the 'All Breeds Quick Search' box type the name or ear number of the animal you are interested in or click on the 'Breeder Search' button to look at all animals belonging to or bred by a particular breeder.

The site will then tell you the animal's owner/breeder details, its breeding values, its pedigree and list its progeny with full links to all of their information.
