## Johne's Disease Risk Level Reminder - CHeCS

If you are looking to buy or sell stock it is important to know your own herd's Johne's disease risk level, as well as that of any cattle that you might add to your herd.

**Level 1** – There have been at least three clear annual herd tests and there is a Johne's Disease herd health plan in place. This is the lowest level of risk

**Level 2** – There has been at least one clear herd test but the herd does not yet qualify for Level 1 status. There is a Johne's disease herd health plan in place

**Level 3** – Three per cent or less of the herd were identified as reactors at the most recent herd test. There is a Johne's disease herd health plan in place

**Level 4** – More than three per cent of the herd were identified as reactors at the most recent herd test. There is a Johne's disease herd health plan in place

**Level 5** – This includes herds without a health plan for Johne's disease, herds that not adhere to the mandatory elements of the health plan and herds that do not carry out the required testing. This is the highest level of risk

### PLEASE NOTE: IMPORTANT RULE ABOUT BUYING AND SELLING AND RISK STATUS!

It is important to remember that if an animal of a lower risk level status is added to your herd, if it is ever sold on from your holding it must be sold as its original risk level status (i.e. a Risk Level 3 animal added to a Risk Level 2 herd must remain as Risk Level 3 if sold again).

However, animals added from a higher Risk Level Status herd to a lower Risk Level Status herd take on the status of the herd that they are added to and must be sold as such (i.e. a Risk Level 1 animal added to a Risk Level 4 herd would then have to be sold as Risk Level 4 in the future).

# NO SMOKING

**It is an offence to smoke in these premises. This includes the Sale Rings, Exhibition/Show Hall, Concourse and all Pennage Areas.**

**Anyone smoking will be asked to extinguish their smoking material immediately or leave.  
Your help in maintaining a smoke free environment for the benefit of all is appreciated.**

The figure consists of three parts: a horizontal bar chart, a table of Estimated Breeding Values (EBV) and Accuracy (Acc %), and a table of Adjusted Weights (Wts(kg)).

**Horizontal Bar Chart:** The chart displays 16 traits on the y-axis. The x-axis represents an index from 70 to 130. A vertical line at index 100 separates 'Below Average' (left) from 'Above Average (Superior)' (right). Bars extend to the left for 'Below Average' and to the right for 'Above Average'. The traits and their approximate index values are: Gest. Length (days) ~105, Birth Weight (kg) ~85, Calving Ease (%) ~90, Mat. Calv. Ease (%) ~95, 200 Day Growth (kg) ~110, 400 Day Growth (kg) ~115, Muscle Depth (mm) ~125, Fat Depth (mm) ~100, BEEF VALUE ~110, 200 Day Milk (kg) ~120, Age at 1st Calv. EBV (days) ~80, Calving Interval EBV (days) ~90, Scrotal Circ (cm) ~115, Docility (%) ~105.

**EBV and Accuracy Table:**

| Trait                       | EBV  | Acc % |
|-----------------------------|------|-------|
| Gest. Length (days)         | -0.5 | 76%   |
